ActivTwist control

AcúVista Grace

New revolutionary ultrasound scanner is specially designed for veterinary applications. It is fully controlled with a single ActivTwist device: a new generation of encoder and integrated touchpad. The control is as simple as is in your smartphone. Simply touch ActivTwist panel or flick with one or two fingers to activate icon and rotate the wheel to change active parameter. Excellent real feedback in your fingers from encoder lets you change parameters without looking to device. No other buttons are needed. You can completely focus on patient but not on the device control. Almost all functions can be controlled both with ActivTwist and touchscreen. Easy to carry: light weight (less than 6 lb) and special designed handle. You can mount scanner on IV stand or place it on table.

ActivTwist revolution control system

ActivTwist operation control. Single all-in-one integrated encoder and touchpad. Multitouch gestures recognition.

Intuitive interface

Simple interface with intuitive operation. Rolling tool bar with icons is similar to smartphone.

Touchscreen

Easy to use 9,7" touchscreen. Simple finger touch operation and measurements.

Vertical orientation

Ultrasound image fills almost whole screen. Image size is the same as at 17" traditionally orientated screen.

Wide range of applications

Ideal solution for outreach, ambulance, interoperation control, anesthesia, control of minimally invasive procedure (biopsy, puncture)

Variety of ultrasound probes

Linear 25mm, 40 mm
Convex R60, R40
Endocavity R10,
Microconvex R15, R20
Custom designed probes
